PJ DeBisschop (10 hours)
- I created a visual representation of the database structure we took from another open source .NET blog, as suggested by Cylosoft
- I managed to get blogengine.NET up and working on my computer to play around with it
- Created a system block diagram
- Will be looking into an initial setup for an MVC .NET program to have a starting point for our project
- Team meeting with Cylosoft to catch them up to where we are and discuss what our next steps are: this includes setting up a database, getting a basic project setup, begin work on the admin panel.

Sebastian Kazun (5 hrs)
- I went through the tutorials for creating a razor pages web app.
- I also got BlogEngine .NET up and running on my computer

Thien Nguyen (4hrs)
- Set up a working .net website with stored files like images and other html pages
- Getting familiar with C#, razor pages, visual studio

Cole Mulligan (6 hours)
- After meeting with Cylosoft and getting a clearer project setup description, I setup my own project MVC .NET project and have been going through the Microsoft razor page docs. I've attempted to get some idea of what an admin area will look like.
- I also got BlogEngine running
