

PJ DeBisschop (20 hours)

- Updated bootstrap to 4.3.1
 - Fixed two views that broke after updating
 - Fixed some rendering issues caused by the update
- Installed CKEditor through Visual Studio package manager instead
 - Got CKEditor working on Archive page as an example
- Got ASP.NET database combined with our database
 - Added ASP.NET Roles
 - Added ASP.NET User Roles
 - And removed our corresponding tables
- Began work on implementing a way for the application to interact with the different database tables
 - Able to use a test project to pull data from the database
 - Created 3 more projects: .Core, .Infrastructure, and .Test
- After being able to access database tables to CRUD I have come across an issue. If you update a table, meaning changing a field type or adding another entry, it will break any calls to get data from the table. Looking into a fix. Current fix is to delete _MigrationHistory data inside the database.
- Began creating UNIT tests for all the repositories implemented

Sebastian Kazun (10 hours)

- Login functionality tested on test database and moving towards our own database
 - Basic functionality works on our own database(register, login) but needs to be properly unit tested still
- Started utilizing bootstrap and razor pages for frontend components of login and registration

Thien Nguyen (8 hours)

- In progress in gravatar
 - Created and added the gravatar project to the main one
 - A class to use the gravatar project's classes to retrieve the image

Cole Mulligan (10 hours)

- Setup basic menu with bootstrap for admin area to navigate pages
- Implementing post creation
 - Using CKEditor for the post content
 - Having issues implementing with the database, will talk to PJ about this
